1 Questions

I would like to scrape some of the classics from the Project Gutenberg source as this coincides with another course I am taking.

I would be interested in scraping twitter for COVID19 and freebritney or netflix. Other options like OU football and Dallas Cowboys would intrigue me as well.

Verify that the two dataframe are different types: type class(df1) and class(df). What is the class of each? ¿ class(df1) [1] "tbl df" "tbl" "data.frame" ¿ class(df) [1] "function

8. Are the column names any different across the two objects? If so, why might that be? Struggling with Spark.....
